[QUOTIENT]™

Since 1999, Quotient has built device agnostic digital solutions for federal clients using open source software, common standards, agile development practices, coordinated privacy and security approaches within a strict governance structure.

We are dedicated to providing high quality cost-effective solutions customized to best meet our clients' project requirements and agency goals. Our core services include project and program management, content management, web design and development, application development, cyber security, cloud engineering, and systems engineering.

Leaders in Federal Digital Services

Content Management Quotient utilizes open source software and proven CMS to enable clients to capture, manage, protect, and distribute digitized artifacts across multiple applications.

Web Design & Development Quotient uses a variety of software tools and open source resources following US Digital Service Design Standards to create engaging, easy-to-use, secure, and responsive websites that can be integrated with social media applications. US Digital Service Design.

Application Development Quotient's cross-disciplinary team of developers develop custom applications, extend COTS, and create interactive digital experiences across multiple platforms and environments.

Cyber Security Quotient is a trusted cybersecurity, information assurance, and information security service provider to the Federal government, specializing in DNS hardening, since 2002.

Cloud Engineering Quotient is experienced in managing and migrating web applications/data to secure cloud hosting environments.

[QUOTIENT]

Complete Digital Service Solutions

We are committed to designing web experiences that fit into the way citizens live, work, learn and play through understanding what people need by understanding what our clients need. Anytime, anywhere, any language, any device. Simple, intuitive and inviting design that enables and inspires people to easily find, participate in and reuse publicly available data.

Software Design/Development

Agile, incremental, and fast-paced style development processes allow designers, developers, management, and the users of software to work collaboratively and quickly to evaluate, test and deploy new capabilities. Upon deployment, we adjust based on user feedback. We support multiple programming languages and disciplined approaches.

Software Development Life Cycle | Agile/SCRUM | Usability | Application Development | Database Administration | Regulatory Compliance

Content Management Solutions

We leverage our experience with multiple content management products to efficiently manage your institutional knowledge.

Content Design | Web Design/Redesign | Information/Technical Architecture Web Statistics Monitoring | Data Migration/Management | Section 508 Compliance

Systems Engineering

We use a modern technology stack including open source software, flexible cloud based hosting and commodity solutions to work efficiently, reduce costs and scale as needed. Hardware, software, and networks are integrated with key organization components, such as people, facilities, policies, and documents.

Data Network Support and Engineering | Enterprise Architecture, Domain Name Service (DNS) | Enterprise Recursive Service (ERS) | Network Monitoring and Reporting | Capacity Planning and Performance Tuning | Systems Administration | Firewall and VPN | Disaster Recovery and COOP | Secure Web Environment | Cloud computing

Project Management

Industry certified professionals apply extensive business and financial knowledge to contract, project, and team management. Clients are gently guided through technology options and federal regulations to deliver the best results within resource constraints. We provide structured, well-defined contracts that support delivery from begging to end.

Software Lifecycle Management, Earned Value Management | Quality Assurance, Risk, and Change Management | Performance Measures & Metrics, Process Improvement | Productivity Improvement | Systems Alignment | Customized Training
